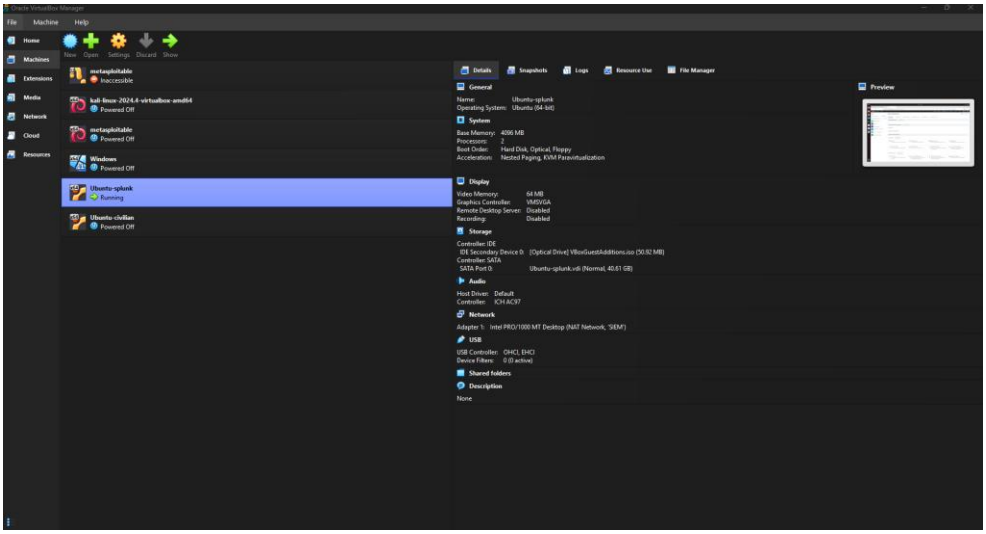
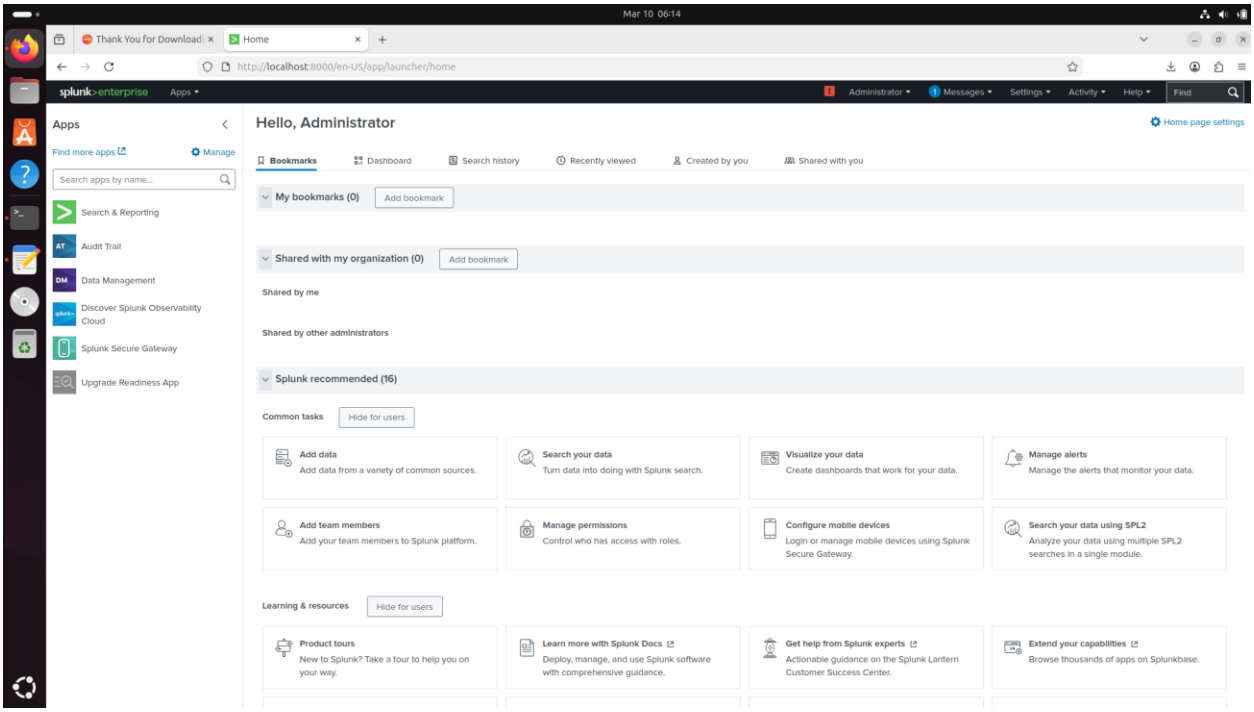
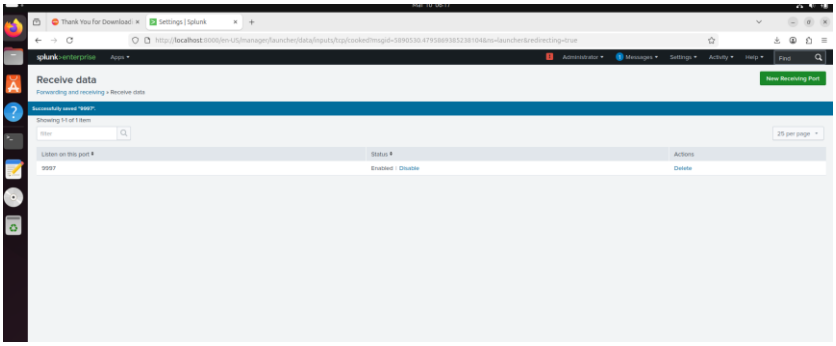
Oracle Virtual Box setup. The machines being used are the kali, ubuntu-splunk and ubuntu-civilian and windows machines



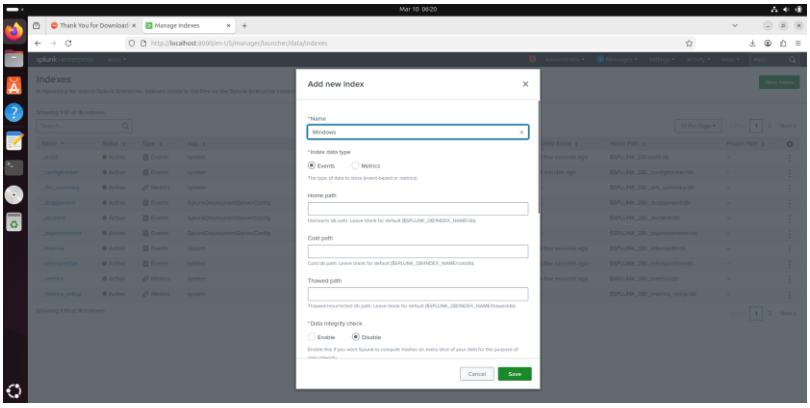
Splunk Dashboard after first login

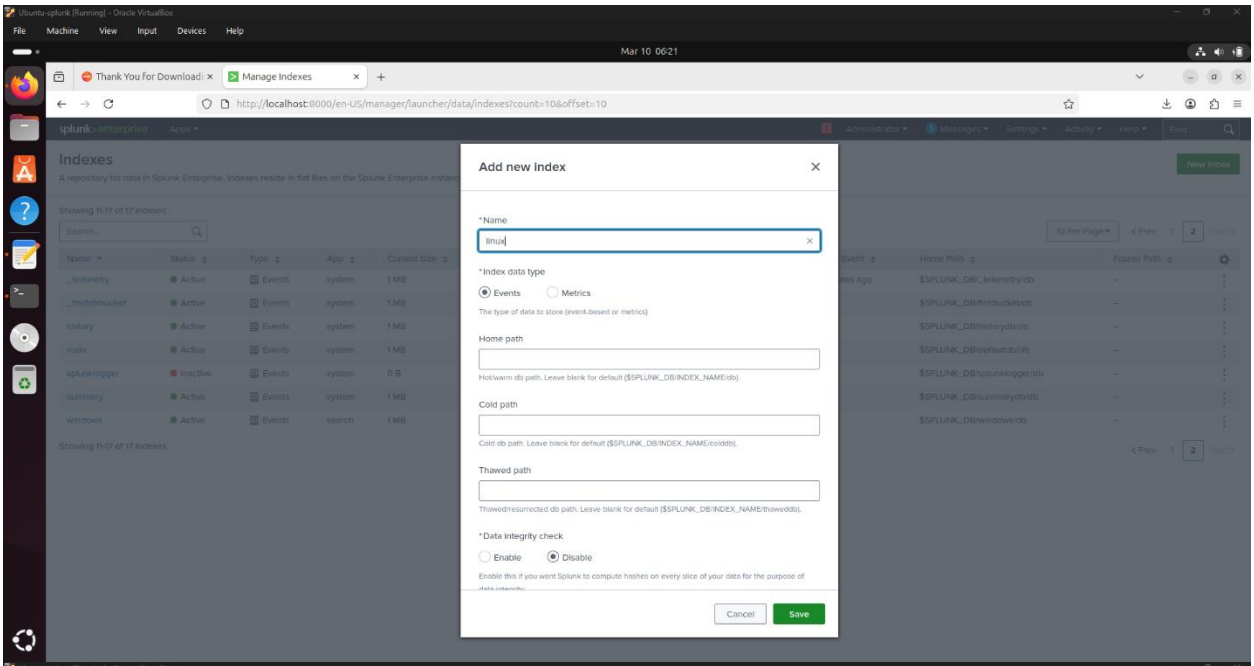


Configured Splunk receiving port on port 9997



Creating indexes for the 3 other machines





Ubuntu-splunk [Running] - Oracle VirtualBox

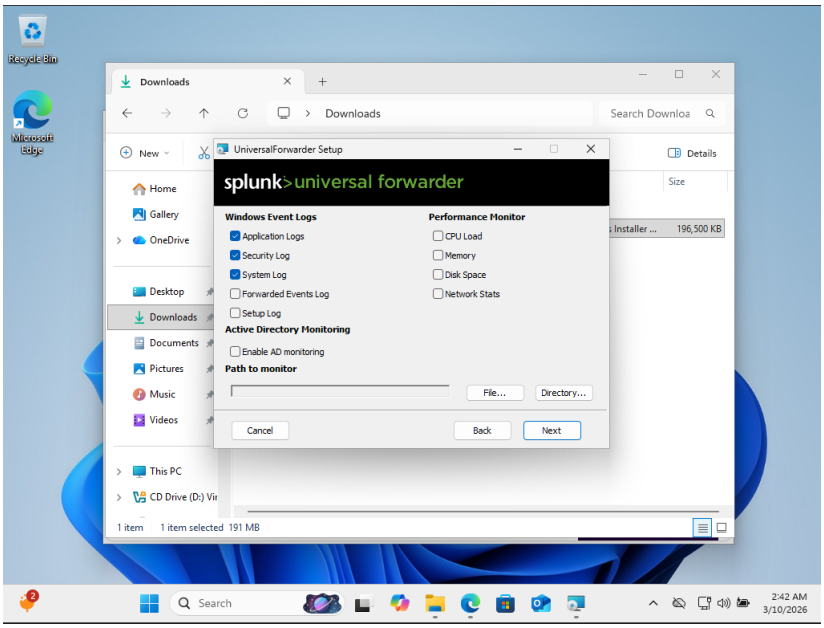
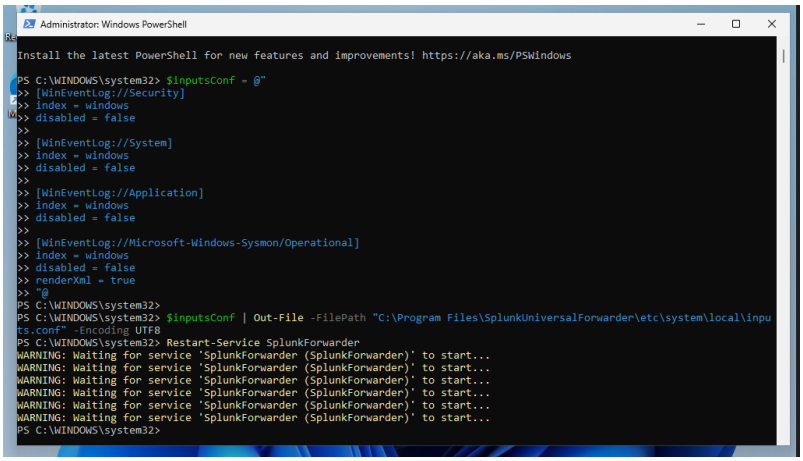
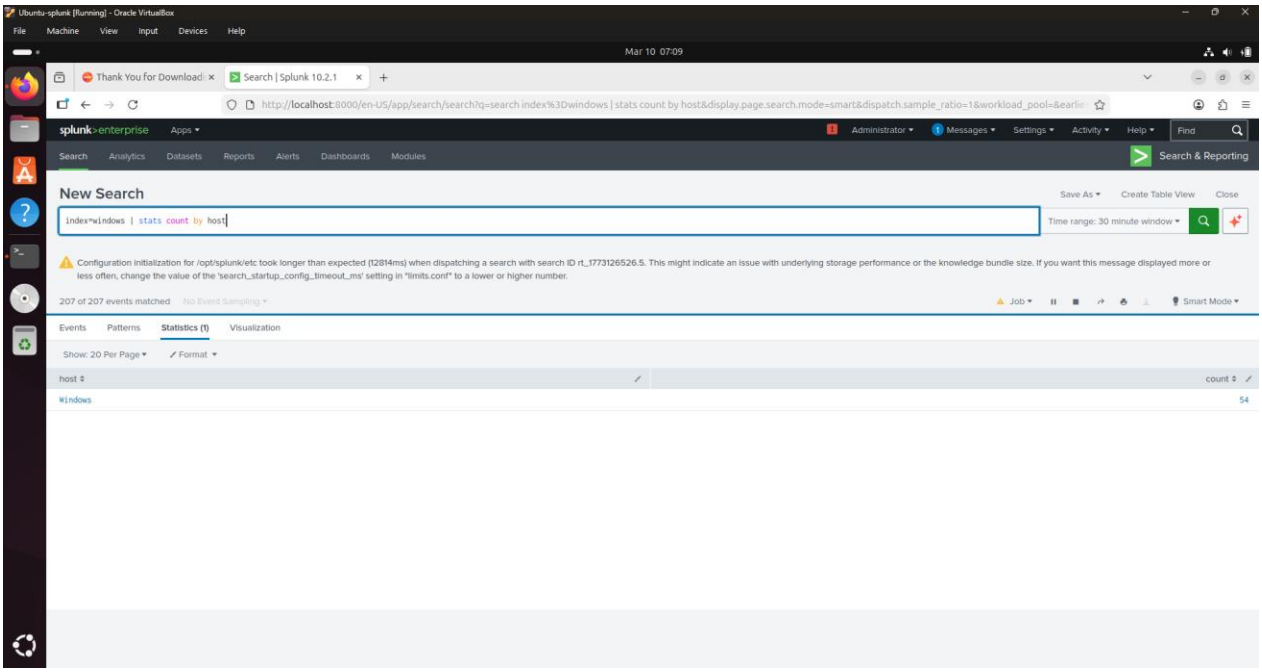
Splunk Forwarder setup on windows VM



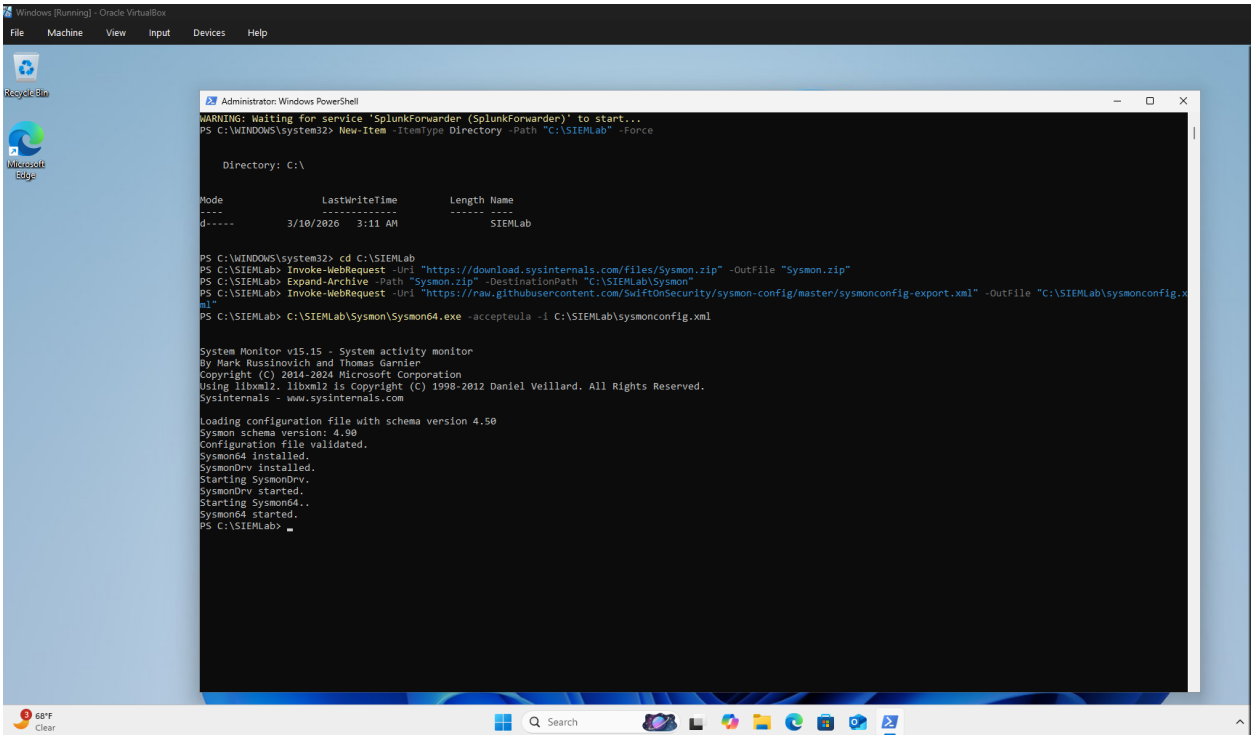
Writing the inputs config

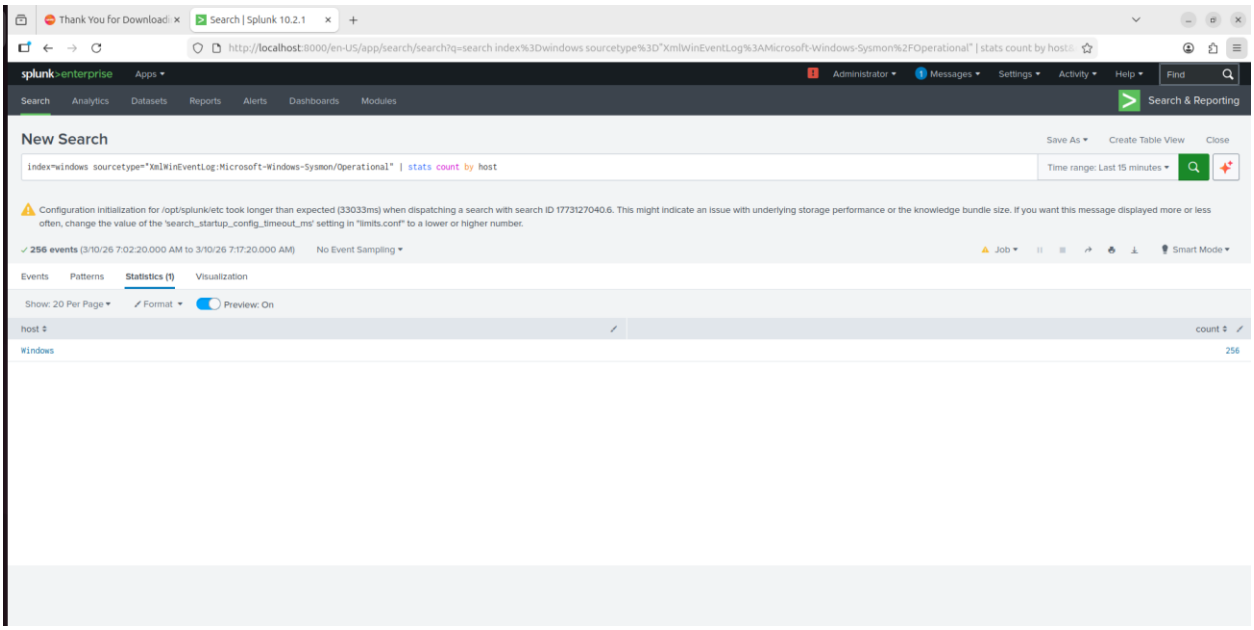


Windows logs are now appearing in Splunk!



I downloaded Sysmon and started it on my windows machine





Sysmon logs are flowing to splunk
